

# Wealth Solutions Service Blended Growth 1

## Objective and strategy

The portfolio aims to grow capital in line with the rate of inflation (CPI) over the long term (more than five years), with a low level of volatility and limited potential for capital loss (Please note that capital is at risk and you may get back less than you invested). It seeks to achieve this by investing around half the portfolio in cash and money market funds, with the rest usually allocated to fixed interest and equities. The majority of the equity allocation will be invested in developed markets. The portfolio may sometimes also have a small holding in alternative investment funds.

This performance is of the model portfolio and may differ from the actual returns received by clients. Please refer to the 'Important information' section. \*Expected Volatility is expressed as the annualised standard deviation of monthly returns. \*\*Since launch figures are from 30 June 2011. \*\*\*Source: Morningstar as at 30 June 2024. These are not formal benchmarks but are proxies for equities, bonds, cash and inflation. The Weighted OCF is 0.31. It represents the costs of investing into the underlying assets (not including any potential front-end/redemption fees) during the course of the assets' financial year. Any fees payable to the Discretionary Investment Manager (DIM), the Platform and the IFA are excluded. The DIM fee is 0.27%.

You should remember that past performance is not a guide to future performance. The portfolio's investments are subject to normal fluctuations and other risks inherent when investing in securities. There can be no assurance that any appreciation in the value of investments will occur. The value of investments and any income derived from them may fall as well as rise and investors may not get back the original amount they invested.

It is not an invitation to subscribe and is only intended to provide information and opinion. Nothing contained within this document constitutes investment, legal, tax or any other advice. It should not be relied upon when making an investment or other decision. Any performance shown represents model portfolios which are periodically restructured and/or rebalanced. Although the model portfolios are applied to a client's account, the actual returns may vary from the model returns shown. In addition, portfolio performance is quoted net of cost of investment but gross of fees - i.e. the OCF of the underlying portfolio investments is taken into account but the Investment Management Fee payable to Liontrust is not, so client returns will be lower than the returns shown in this document. Returns do not take account of platform, product provider or Adviser fees, details of which can be found in the Wealth Solutions Service Brochure. Any figures shown have not been externally audited. All figures in this document are sourced from Morningstar and are total return in sterling.

The asset allocation information provided represents our model portfolios, please note that the asset allocation of a client's individual portfolio may differ. The portfolio holdings represent holdings in the portfolio as at 30 June 2024. The actual holdings may differ from the above list at any other date. Due to rounding the figures may not add up to 100%.
